What drone did you use? Looks like a DJI Phantom 3 (pro)!?
It's rarely the case that we see these strange white flying objects (the UFO, not the drone) that close and clear to the drones' lense.

BTF Studios /Cottingham 4 months ago

Yes it's a DJI Phantom 3 Pro, I use Adobe Premier Pro now for editing so I'll have another look frame by frame.

homeruniverse 4 months ago

Thanks. I extracted frames from this video and can see the object in frames 388 to 398. I can't estimate the speed, because the object isn't that bright on such a cloudy day and its altitude is too close to the drone ones. Some of these objects were recorded with a speed of a couple of thousands of km/h. But this one does not seem to be that fast when a Phantom 3 pro can capture it that clearly. But anyways, great catch.

Were earlier comments for this video deleted?

BTF Studios /Cottingham 5 months ago

Not to my knowledge! I can still see them!

homeruniverse 5 months ago

Click here to chat with others watching the video Thanks for the reply. They disappeared for me today!? I could only see the one from Patrick Conlon. But now I see my earlier one again. This seemed to happen to some of the other videos as well---Idk, maybe a bug, since YT seemingly flags comments

with links in them; I need to make backups.

Very nice catch; it comes so close... Here is a playlist of similar phenomena: <http://bit.ly/2G2PODP> -- they occur all over the world. This is the position of the drone, correct? <http://bit.ly/2HJ3lxj>
When exactly did you record this (date, hour)? I would like to have a look at the weather data from satellites at that time -- some people believe that these are hailstones (I don't).

It was uploaded on 6 Jun 2017 ,so probably taken at approx 2pm on Saturday 3rd June. The drone was 400 feet high in the location you've already identified. I've looked at some of the other footage and some do look similar. I originally thought it was a bird but it looks to be travelling too fast. Keep me informed if you find out anything!

homeruniverse 6 months ago

Thanks for the quick reply and the info. I am a Ph.D. student. I want to compile the good cases with all necessary data and let several experts (meteorologists, aeronautic engineers, CNES/GEIPAN etc.) have a look. If there is no mundane explanation one could think about setting up ultra slow-motion cams and catch some better pictures. This is a truly puzzling phenomenon. I keep you (and the others) updated.

Patrick Conlon 1 year ago

The landscape looks great, well put together, looking forward to seeing more of this. Keep them coming!
