Shot at 4k/60fps at Chapel Point State Park in Port Tobacco, MD at approx. 4pm on 3/18/2017. Drone was at about 175 feet in altitude.

Need help identifying this white object that flies under my drone going about 800 mph, a calculation based on the distance it covered in 1 second. It comes out of the woods to the top right and flies towards the viewer. I at first thought it was a bird but bird's don't fly that fast.

I think it is a speck of dust that flies under the camera.
