At [2:40](#) in the video, you'll see an unidentified flying object appear in the upper right part of the screen and pass underneath the drone at a very high rate of speed. The DJI Mavic Pro completely shut down and lost all connection immediately after this, but thankfully it returned home as it is designed to do.

I didn't notice it at first while flying, and only saw it after I watched the video afterwards. What was this, and was this the reason why the drone lost all communication?
