Malin, a couple of month ago you described that Also I notice that they are not quite straight in path but they have a very small repetitive movement in the vertical plane like a ping-pong ball heating the table on the way, kind like they are bouncing on an invisible horizontal surface. I notice this also on an YT movie in witch one similar object is running very direct to the drone and this vertical movement is much visible.

Do you have more info (links) on that now? -- I could not find other cases that would corroborate this description!?

**morkovetz** 2 months ago

that was a fast object...

**homeruniverse** 5 months ago

Outstanding catch! When exactly was that in the day?  
I have never seen such a good stabilized video of these things.  
Here is a list of them in drone footage: <https://bit.ly/2Gvc3CT>  
An more extensive list: <https://bit.ly/2I02UQq>

**Malin Oloier** 5 months ago

Around one hour before sunset.

**homeruniverse** 5 months ago

Thanks. I see you captured another video of these things. Common explanations are insects, birds or hailstones, but these don't work imho. Did you came up with any good (mundane) answer?

No idea what those are, I have around 10-15 similar footage from 100 to 300m altitude, more or less visible. Generally seem to run at high speed. Birds usually do not fly so straight. Possible to be some plants parts goes with the wind but in some footage I have they go in different directions - I do not think wind change direction so quick. When I have some time will post all

**homeruniverse** 5 months ago

I analyzed the videos in the playlist above quite extensively. There are so many cases from so many different sources, scientists have to accept the reality of this. The phenomenon occurs in very different weather environments---they seem completely independent from wind directions. It can also not be a common animal; this speed is way too energy demanding to achieve with eating, digesting and muscles. It is even hard to believe that these are technical devices based on our human engineering capabilities for quite similar reasons. Given the other literature on the topic, UFO/alien hypotheses are not too far fetched imho. On the long run ultra-HD footage from a cam with very short shutter time (slow-motion) would be very interesting.---I try to get some research funding for that for a while now (I am a Ph.D. soon).  
Is your footage of 10-15 cases always from this spot? If so, that would be a good place to set such a camera up.---But given from what I have seen so far, these things seem to occur more or less everywhere.

I got few more from the same location at different moments also some from other places. In my experience seem to be more clearly at sunset. Also I notice that they are not quite straight in path but they have a very small repetitive movement in the vertical plane like a ping-pong ball heating the table on the way, kind like they are bouncing on an invisible horizontal surface. I notice this also on an YT movie in witch one similar object is running very direct to the drone and this vertical movement is much visible

Very interesting. Can you link a good exemplary video showing very small repetitive movement in the vertical plane like a ping-pong ball heating the table on the way, kind like they are bouncing on an invisible horizontal surface? -- I couldn't find that effect so far. In most videos they have a stable shape, meaning that they have no wings flapping and the blob like motions of your stabilized version are somewhat different. Also, the objects often seemingly have a non-round symmetrical shape (e.g. <https://youtu.be/ZQWdYGkEp-I> & [6BUA6zdbgEE](https://youtu.be/6BUA6zdbgEE))  
What software did you use for the stabilization effect? (I'd like to run them on all the videos)

**Malin Oloier** 5 months ago

When I have some time (next weeks) will send you the details mentioned above
