Did you use a DJI Phantom 3 Standard or another model from the Phantom 3 series (Advanced, Pro, 4K)?

Malin Oloier 3 months ago

phantom 3 pro

Malin Oloier 3 months ago

4k

homeruniverse 3 months ago

Thanks, that makes sense. Both have the same digital camera sensor (from the Sony Exmor R series). They are vastly superior to the Phantom 3 Standard hardware for capturing fast moving objects (in weak lighting conditions).

In another comment you said that you know cases of these white objects showing very small repetitive movement in the vertical plane like a ping-pong ball. Do you have any further data on that? In never saw that during the last couple of months in which I analyse a barrage of cases.

homeruniverse 8 months ago

Btw: here is another example where it does a curvature move around a mountain: https://youtu.be/InIUh2bPxu0 (00:30-00:36)

homeruniverse 8 months ago

Again a very nice analysis from you :D -- That hockey stick kind of move at the beginning is really exactly as you plot it (I was puzzled, so I replicated it frame by frame). It always seemed to me that they go in a straight line, but some examples, as this one, indicate curves with a very big radius. Given that these things occur in various altitudes and I know of no case of crashing, this makes sense.
